

Two-Day Course in Tampa, Florida • January 9-10, 2010

Course Summary

This two-day workshop is designed to provide an understanding of how to effectively apply sensory diets with individuals of all ages with sensory processing disorders. This course will demonstrate strategies to facilitate the design of sensory supportive classrooms, home, and community environments. Objectives are aimed at developing an understanding of the vestibular system, postural integration, proprioception, dynamics of breath, rough and tumble play, and using sound as a tool. This practical, hands-on workshop will immediately support and reinforce successful application of these concepts in clinical practice to clients with sensory modulation disorders. This course provides 12 contact hours or 1.2 AOTA CEUs.

Instructors

This course will be taught by **Sheila Frick, OTR** and **Julia Wilbarger, Ph.D., OTR**

Sheila is an internationally esteemed clinician, lecturer, and pioneer in Occupational Therapy. She has over 20 years of clinical experience, having worked in psychiatry, rehabilitation, and home health before specializing in pediatrics. Her expertise includes sensory processing dysfunction, sensory integration, and auditory interventions. She created and continues to expand Therapeutic Listening, which she has taught to over 5,000 therapists worldwide. She also lectures on such topics as clinical neurology, respiration, the vestibular/auditory system, and various auditory interventions. She is the creator and author of *Listening With the Whole Body: Clinical Concepts and Treatment Guidelines for Therapeutic Listening*, and co-author of *Core Concepts in Action*, *Astronaut Training*, *Out of the Mouths of Babes*, and *M.O.R.E: Integrating the Mouth with Sensory & Postural Functions*.

Julia has worked as an Occupational Therapist in early intervention with high risk and developmentally delayed infants and toddlers, and in private practice and the public schools with a focus on children with learning, developmental and sensory integrative disorders. She has also developed community based and transitional programs for children with a variety of disorders and conditions. The aim of her research is to understand the underlying neuropsychological processes that influence how people with neurodevelopmental disorders respond to the sensory and affective dimensions of the environment. Her research incorporates the collection of both psychophysiological and neuropsychological data. A further area of interest is to develop means to bridge the gap between Occupational Therapy researchers and Occupational Therapy practitioners to document the effects of treatment.

Course Schedule

January 9

8:15 Check-in begins
8:30 Overview of sensory processing and sensory diets
10:30 Break
10:45 Vestibular system
12:15 Lunch (on your own)
1:15 Posture/Proprioception
3:00 Break
3:15 Case studies
4:30 End

January 10

8:30 Dynamics of breath
10:30 Break
10:45 Sound as a tool
12:15 Lunch (on your own)
1:15 Case studies
3:00 Break
3:15 Case studies (continued)
4:00 Closing questions
4:30 End

Creating Effective Performance, Precision, and Power in Treatment and Sensory Diets
